UNIVERSAL JOINT

Also known as U-joints, universal couplings, or Cardan joints, universal joints connect the drive shaft to the gearbox from one side and to the axle from the other side. Found in rear-wheel-drive vehicles, these are engineered to withstand angular misalignment and enable efficient transmission of rotary motion or torque.

Consisting of a cross-shaped spider with needle roller bearings on each side held in place by caps and circlips, universal joints prevent shaft breakage as they adapt to the upward and downward movement of the axle in connection with the gearbox.
